MAKING THIS THE BEST YEAR YOU HAVE EVER HAD

Did you know that the biggest groundbreaking discovery in anti-aging has just been made? Have you ever wondered why some people look younger than they really are? The scientist at Purdue University along with the scientists at Stanford University has solved this age-old puzzle. They have discovered that we have an enzyme called arNOX that creates accelerated aging in our skin and in our body. And it stores itself up in the cell and about every 5 to 7 years it floods our system causing what is called accelerated age bursts. You know when someone looks fantastic and you have not seen them in a few years and they look dreadful, they had an age burst. The scientists at Nu Skin have found a way to stop this enzyme -so we can now stop age bursts. What is even more exciting than that is the world breakthrough in anti-aging. They have found the very sources of aging. This world breakthrough discovery is at the genetic level. The scientists at Nu Skin have found clusters of genes that control aging. When these clusters are turned on they create tissue repair and when they are turned off they created tissue damage. Tissue repair is agelessness and tissue damage is aging. What is so exciting is that they have found a way to reset these youth gene clusters back to youth. This is not only a ground breaking discovery in science it is a ground breaking opportunity to our pocket book! At the Pre Launch of this technology this October, 9 million dollars were generated in the first 4 hours. This is huge!
